Review from RC Driver, Issue 108, December 2012

In electric RC, the pinion gear is meshed with the spur gear and provides power to drive train. A quality pinion gear will provide maximum transfer of speed and power to the motor.

"I am a fan of precision manufactured, quality pinion gears that when properly meshed with a new or good spur are totally silent! These gears from Yeah Racing certainly fill the bill." By Chris Kovachevich, RC Driver Issue 108, December 2012
