

(#TATT-022BU) Drift Spec Shock-Gear 50mm Damper Set for 1/10 RC Car Blue

Model : TATT-022BU
(#TATT-022BU) Drift Spec Shock-Gear 50mm
Damper Set for 1/10 RC Car Blue

Description:

Yeah Racing's updated damper set for 1/10 RC Drift cars. Simple yet effective solution for dampening your 1/10 drift cars, be they RWD or AWD! Long lower ballcup allows for more droop settings than before!

The Yeah Racing new damper set has spent great effort on increasing the durability and maintenance ease.

The damper shaft is coated with titanium for minimizing friction and longer lifespan.

To cope with the need to change the damper piston from time to time, the shock gear have selected premium quality anti-leak O-Ring to keep the damper oil in place.

CNC machined high grade aluminum were used to build this high end damper set for maximum durability at the minimum weight.
