

(#XR-T4-027) Spring Steel Double Joint Driveshaft for Xray T3 T4

Model : XR-T4-027
(#XR-T4-027) Spring Steel Double Joint Driveshaft for Xray T3 T4

Description:

In the current age of brushless and LiPo power, a pair of DCJ in the front is a must have for smooth and consistent cornering. By having double joints, the angle of the universal at full steering lock is reduced, which in turn reduces the chatter produced when compared to traditional single jointed drive shafts!
